

# MP Mat

## multi-purpose composite mat system

In many areas of the world, the soil does not possess adequate strength to support aircraft, aircraft support equipment, or troop operations. The combination of poor terrain, harsh weather conditions, and lack of infrastructure can unfavorably impact our armed forces ability to act quickly and decisively. A structural medium is required. MP Mat is the right medium for the task.

The MP Mat is a cost effective, multi-purpose, low foot print matting system. State of the art composite materials have been combined to produce six-foot square panels. These panels weigh one hundred fifteen pounds, and are connected together using no special tools or equipment.

All connected, the panels create a super strong stable working surface of any size or shape over a wide range of unstable ground conditions.

- Aircraft Tarmac
- Heli Pads
- Roadways
- Tent Flooring
- Parking Areas
- Storage Pads

Durable Composite Construction  
Ultraviolet (UV) Stable  
Lightweight 2.9 LB/sq ft

Supports 45,000 LB Wheel Loads  
Low Foot Print  
Rapid Deployment

Flat Stable Working Surface  
463L Air Pallet Compatible  
Re-Useable

Mission-Ready 

'World Market Leader' for matting system development, knowledge and experience.

MP Mat Systems are Tested and Mission-Ready:

- Remote Base Operations
- Airfield Support
- JRAC
- JLOTS
- TRANSLOTS
- Medical Support
- Helo Pads
- Temporary Motor Pool Surface
- Portable Maintenance Working Surface
